

Pump Couplers for B&G 1510 and e-1510 Pumps

Determine the replacement pump coupler by the **motor frame size**.

However, there are two motor frame sizes where you need to know the diameter of the pump shaft at the water seal side: ¹326T and ²404TS, and two frame sizes where you need to know the "shaft space": ³284T and ⁴286T.

* The pump couplers are made by Woods Mfg. for Bell & Gossett. Some couplers may have been provided by Lovejoy brand couplings, or others. The actual brand name of coupling can be found on the metal flange portion of the pump coupling. The Rubber Sleeve (in-between the pump coupling flanges) is the flange component that most often needs replacement.
